

# HELP, IT'S MY FIRST TIME AT A JAM!!

First time at a Raspberry Jam?  
Not sure what to bring?  
Then read on.....

---

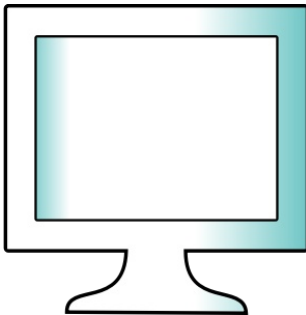

A Raspberry Pi.

A Model B(+) would be recommended but it's fine to use an Model A(+).

Dont forget your SD card and a suitable 5v micro USB Power Supply

A keyboard and mouse

If possible bring a monitor to use as these may not be provided.

Also bring suitable cables. Ideally this should be a HDMI to DVI cable as most modern monitors will not have an HDMI socket.

A compromise is to use a HDMI to DVI adaptor which will allow you to use an existing HDMI cable. This will also require a slight configuration change allow the correct resolution.

You can also get a HDMI - VGA adaptor that will allow use with a monitor with only a VGA connection.

Other Top Tips:

Bring a Power Extension as plug sockets may be short supply!

If using an A(+) board, remember that you only have a single USB socket...consider sourcing a USB hub to expand this single socket. A self-powered one would be suitable.

There probably wont be any available WIFI so if internet access is needed consider a personal hotspot.
